# Exploring Behind The Fence: Human Environmental Impact

Looking over the fence, the area behind seemed untouched by people's designs and able to densely grow. Indeed, the feeling behind the fence was of the power of nature; I felt closed in and that I didn't belong behind the fence.

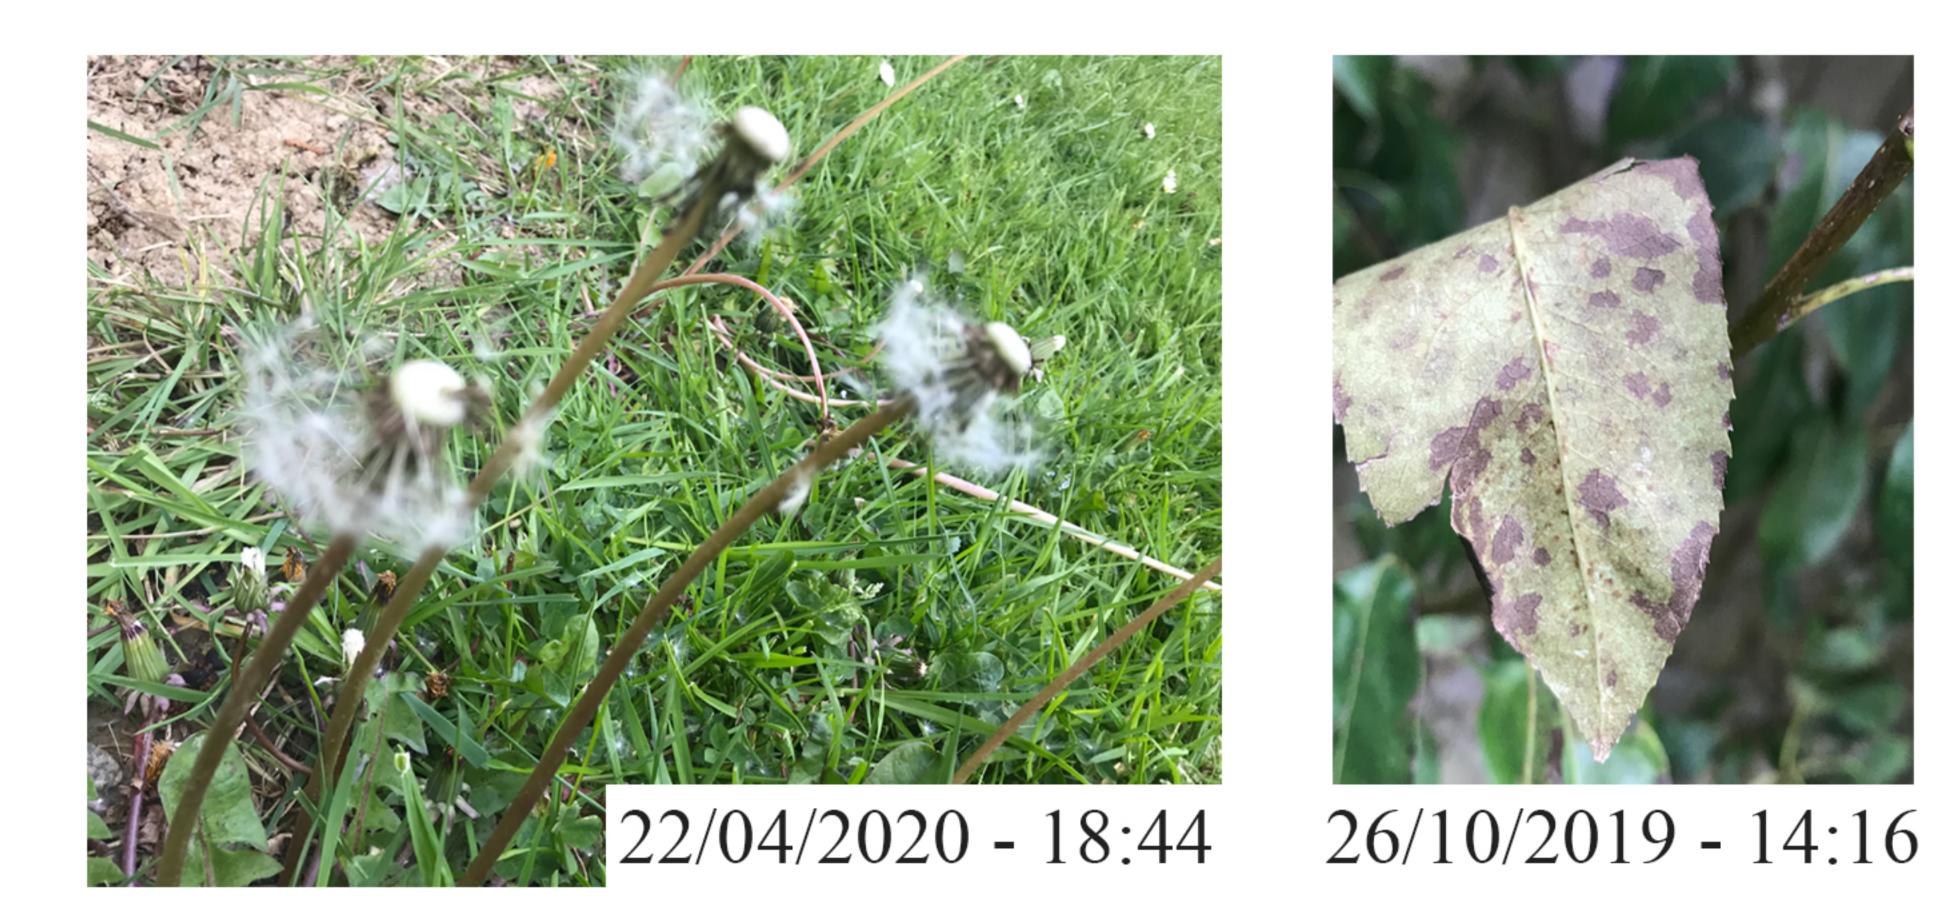

In the close area behind the fence of a neighbouring house, there were signs of small scale fly tipping as plastics and synthetic items are found on the ground. This is harmful to the local environment. This area is exploited as it's not commonly visible to people who may object to this.

# Looking Closely

How each part of the place links to human interference.

Natural Parts

#### Identified 3

Human-caused Positive Parts

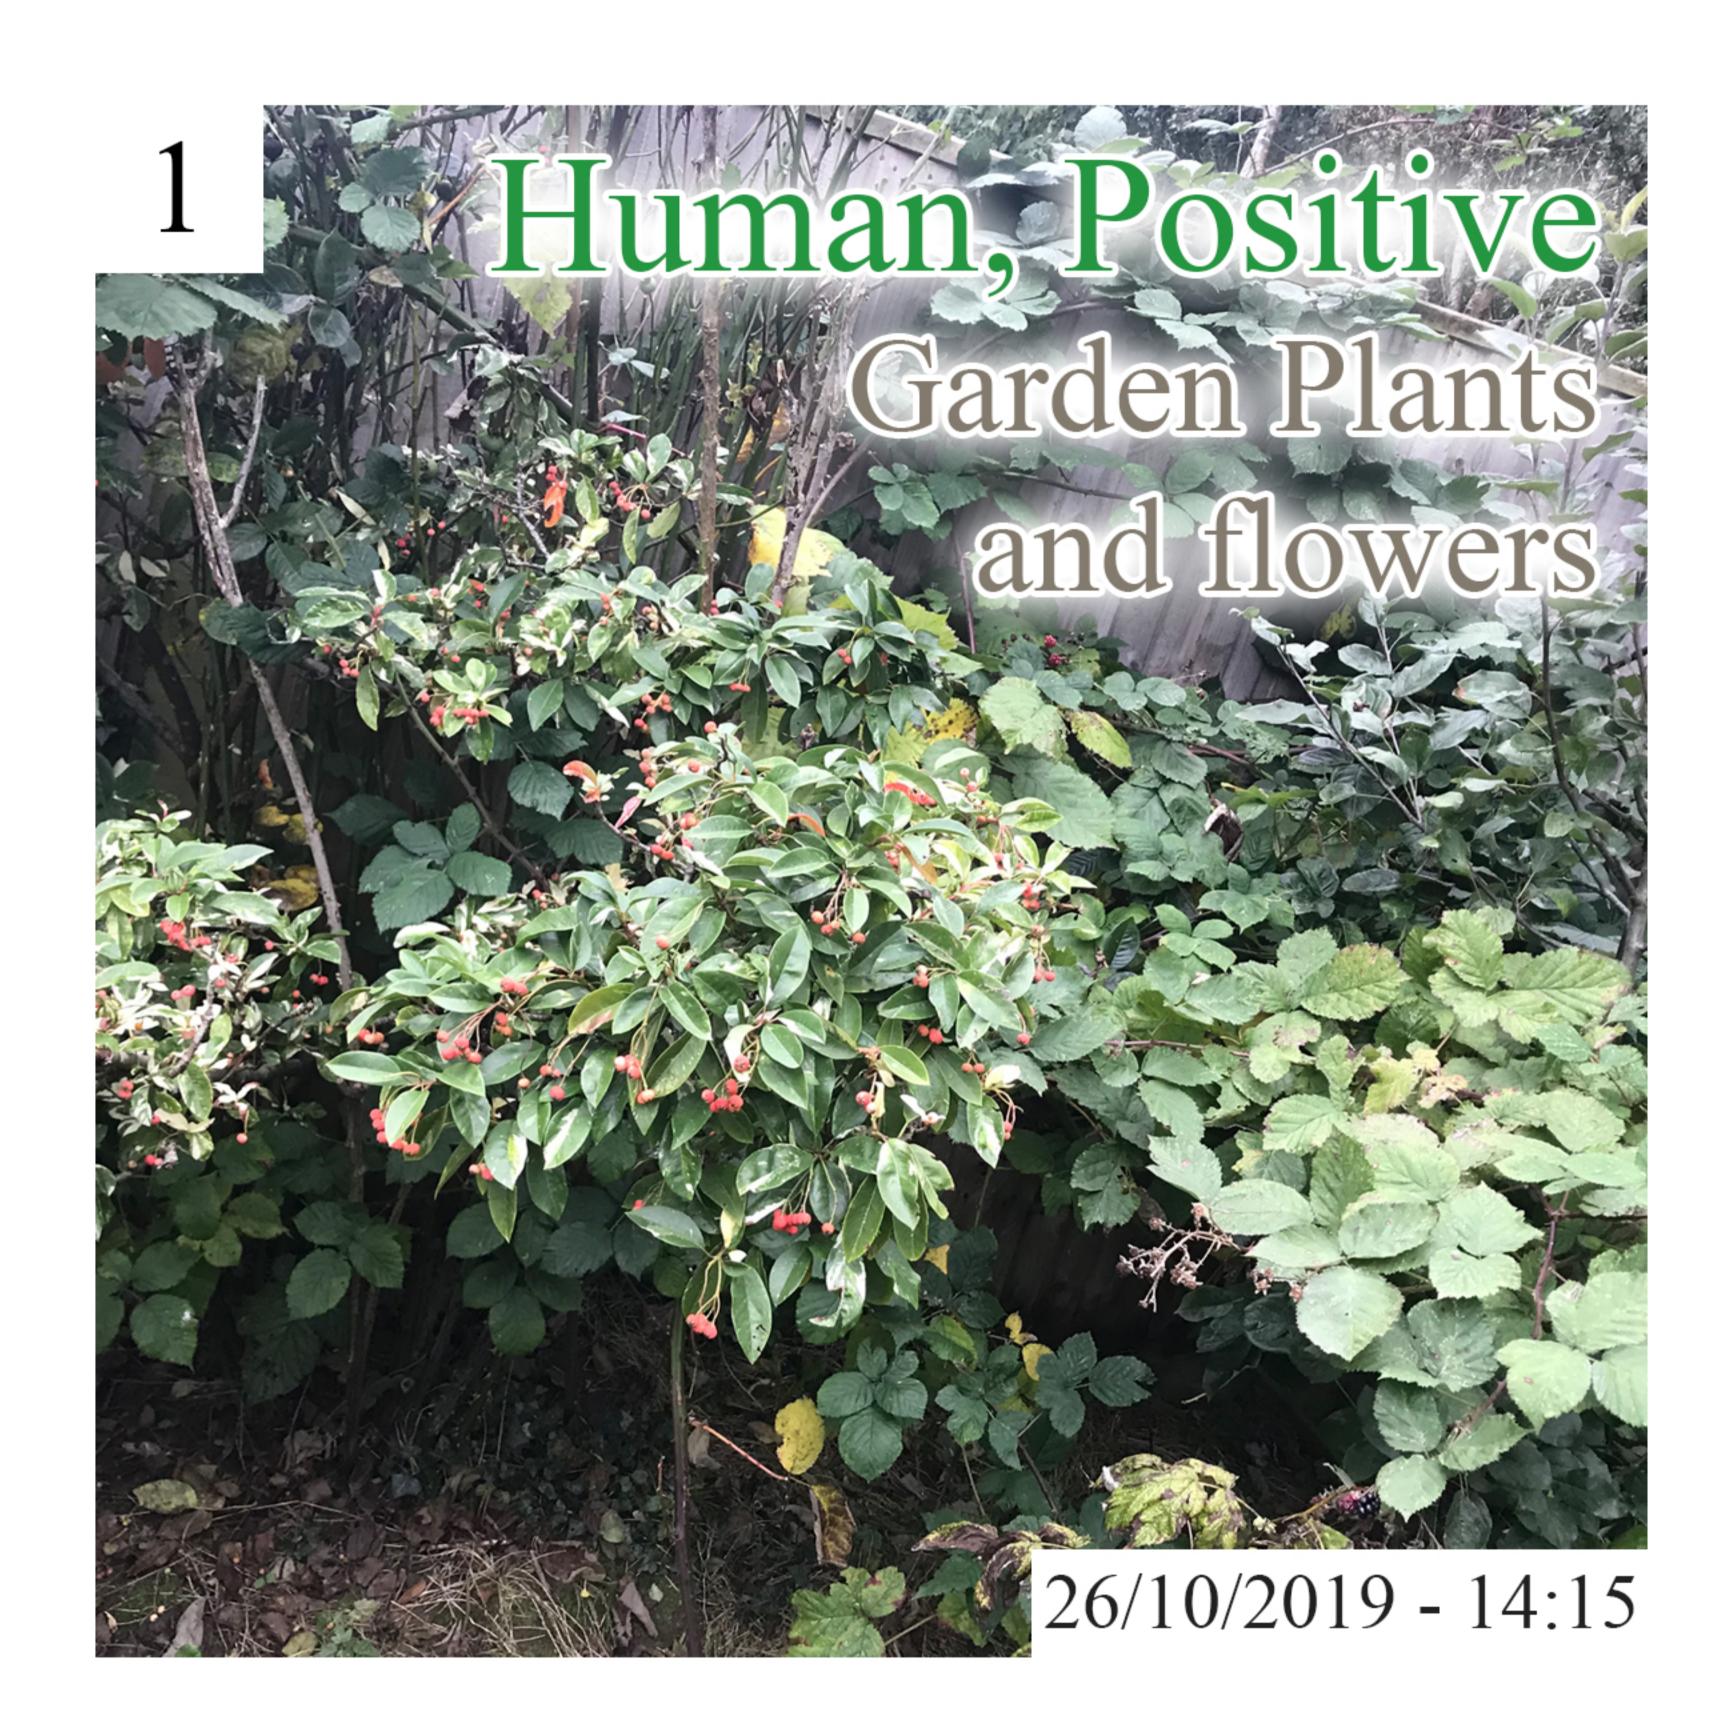

## Identified 2

Human-caused Neutral Parts

#### Identified 4

Human-caused Negative Parts

## Identified 1 Undetermined Part

- Result of human design as they were planted.
- Contribute to local nature for a positive impact.
- Benefit from human care of watering.
- Not disruptive since weeds naturally appear in the place.

- Result of human presence, introduced to occupy the place by human owner.
- Serves to deter some local wildlife away from the area, a negative impact.
- Makes no positive contribution in the place.
